EDUCATION

KIET Group of Institutions

Bachelor of Technology in Information Technology

November 2021 – May 2025

CGPA: 7.51/10

PROFESSIONAL EXPERIENCE

Creators Mela | *Founding Engineer*

February 2026 - Present

- **Designed & built FastAPI backend** — end-to-end video SaaS platform covering auth, billing, transcription, and rendering workflows across 3 microservices.
- **Migrated video rendering from Canvas/Pillow to Remotion Lambda** — distributed frame rendering across Lambda workers, cutting render time from 3-4 min to 30-40s for 60fps/60s videos; handling 20GB+ renders daily across 1,000+ jobs.
- **Eliminated rendering infrastructure costs via client-side browser rendering** — dynamically routes jobs to user's browser for capable machines, offloading CPU entirely to the client; falls back to Remotion Lambda for low-end devices, solving the pricing challenge at 1,000+ jobs/day scale.
- **Integrated dual transcription engines** — Deepgram Nova-3 and Sarvam AI with cost-optimized routing: for videos under 30s, Batch API with webhooks for longer videos, word-level timestamp accuracy under 100ms.
- **Implemented S3 presigned URL upload flow** — direct client-to-S3 uploads up to 3GB per video, bypassing backend entirely; webhook-triggered async transcription pipeline via Celery + Redis processing 1,000+ jobs daily.
- **Developed advanced caption editor** — real-time styling controls (fonts, colors, shadows, stroke, animation) with immutable timestamp locking, ensuring consistent rendering across all video outputs.

Experiment Labs | *Fullstack Engineer*

December 2024 - January 2026

- **Architected a multi-tenant SSO system** — unified auth across 4 products, more than 4,000 users, shared user database with secure cross-domain sessions.
- **Cut session validation to under 50ms** — Redis-backed session layer with auth & RBAC system powering all services — 39+ permissions, 5 user roles, multi-tenant org isolation.
- **Shipped an AI recommendation engine** — OpenAI embeddings + Pinecone vector search delivering personalized career insights to 3,000+ students.
- **Migrated from AWS Lambda to EC2** — serverless timeouts were causing payment failures; moved to persistent servers with webhook listeners, fixing transaction reliability across 500+ monthly transactions.
- **Delivered React frontends across 3 products** — optimized server-state caching and client persistence reducing redundant API calls; generated personalized **student PDF reports** with career roadmaps and AI-driven recommendations; handled secure file uploads and PDF downloads via **S3 presigned URLs**.

TECHNICAL PROJECTS

Work Holo | *React.js, Hono, oRPC, RabbitMQ, PostgreSQL, FreeSWITCH, Bun*

July 2025 – Present

- **Built a multi-tenant agent platform** — organizations can manage agents with full RBAC, channel-based communication, and real-time attendance tracking; designed for independent data isolation per organization.
- **Engineered a VoIP dialer using FreeSWITCH** — agents make outbound calls to leads via SIP trunks and DID numbers; integrated call routing, session management, and live call state sync to the frontend.
- **Built real-time call monitoring dashboard** — live agent call status, call duration tracking, and call logs with disposition tagging; enabling supervisors to monitor and manage dialer campaigns across the organization.
- **Implemented real-time messaging** — ElectricSQL for instant message sync across clients; RabbitMQ for async processing of message delivery, receipts, and push notifications.
- **Integrated Better-Auth with OAuth 2.0** — role-based access with granular permission assignment and revocation across agents and organization hierarchies.

TECHNICAL SKILLS

Languages: JavaScript/TypeScript, Python

Frontend: React.js, React Query, Redux, Tailwind CSS

Backend: Node.js, Express.js, Fast API, Django, RESTful APIs, GraphQL, Microservices

Databases: MongoDB, PostgreSQL, MySQL, Redis

DevOps: AWS (S3, EC2, Lambda), CI/CD, Docker,
